A Concise and Descriptive Title of Your Thesis

by

Burak Arayıt

A thesis submitted to
the Graduate School of Science and Engineering
in partial fulfillment of the requirements for the degree of

Master of Science

in

Electrical and Electronics Engineering

Özyeğin University

Month Year

Approval

This thesis titled “**A Concise and Descriptive Title of Your Thesis**” and submitted by **Burak Arayıt** in partial fulfillment of the requirements for the degree of Master of Science in Electrical and Electronics Engineering has been examined and approved by the committee below.

Prof. Dr. Name Surname (Advisor)

Prof. Dr. Name Surname

Prof. Dr. Name Surname

Date of approval: _____

Declaration

I hereby declare that this thesis is my own work, that it has been produced in accordance with academic rules and ethical conduct, and that it has not been submitted, in whole or in part, for any other degree or qualification. I have fully cited and referenced all material and results that are not original to this work.

Name, Last name: Burak Arayıt

Signature: _____

Abstract

Write a self-contained summary of your thesis here (typically 150–300 words): the problem you address, your approach/method, the key results, and what they mean. The abstract should read on its own, without reference to the rest of the document, and should avoid citations, figures, and undefined abbreviations.

Keywords: keyword one, keyword two, keyword three, keyword four

Acknowledgements

I would like to thank my advisor, Prof./Assoc. Prof./Asst. Prof. Advisor Name, for their guidance and support throughout this work. **[TODO: Personalize this section.]**

Chapter 1

Introduction

This chapter introduces the problem, explains why it matters, states the objectives and contributions of the thesis, and outlines the structure of the remaining chapters.

1.1 Motivation and Problem Statement

Describe the context and the gap your thesis addresses. A citation looks like this [1], and you can cite multiple sources together [1], [2].

1.2 Objectives and Contributions

State precisely what this thesis sets out to do. A bulleted list of contributions is common:

- First contribution.
- Second contribution.
- Third contribution.

1.3 Thesis Outline

Chapter 2 reviews the relevant background and related work. Chapter 3 presents the proposed method. Chapter 4 reports and discusses the results. Chapter 5 concludes and outlines future work.

Chapter 2

Background and Related Work

Provide the theoretical background a reader needs, and survey prior work, making clear how your thesis differs from or builds upon it.

2.1 Theoretical Background

Numbered equations are referenced with Equation (2.1). The continuous-time Fourier transform is

$$X(f) = \int_{-\infty}^{\infty} x(t) e^{-j2\pi ft} dt. \quad (2.1)$$

Inline math and units work together, e.g. a supply voltage of 3.3 V and a sampling rate of 1 MHz.

2.2 Related Work

Summarize and critically compare existing approaches [2].

Chapter 3

Methodology

Describe your proposed approach, system design, models, and experimental setup in enough detail that the work could be reproduced.

3.1 System Overview

Figure 3.1 shows how to include a figure. Place image files in the `figures/` folder and reference them by filename.

Figure 3.1. Example figure. Replace with your own block diagram or plot.

3.2 Experimental Setup

Table 3.1 shows a table built with `booktabs`.

Table 3.1. Example parameters.

Parameter	Symbol	Value
Sampling frequency	f_s	1 MHz
Supply voltage	V_{dd}	3.3 V
Number of taps	N	64

Chapter 4

Results and Discussion

Present your results clearly (figures, tables), then discuss what they mean, their limitations, and how they compare to prior work.

4.1 Results

Report the outcomes of your experiments.

4.2 Discussion

Interpret the results, address threats to validity, and state limitations.

Chapter 5

Conclusion and Future Work

Summarize the contributions and findings of the thesis, then outline promising directions for future work.

5.1 Conclusion

Restate what was accomplished and why it matters.

5.2 Future Work

Describe open problems and possible extensions.

Appendix A

Supplementary Material

Use appendices for material that supports the thesis but would interrupt the flow of the main text: long derivations, extra plots, code listings, datasheets, or detailed tables.

Each `\chapter` after `\appendix` is lettered automatically (Appendix A, Appendix B, ...).
